Product

DCS (Distributed Control System)

BE-DCS is a newly developed product with the concept of “scalability”, “reliability” and “easy operation” gathered together with customer’s request and technologies cultivated by our company for many years.

High Scalability

BE-DCS has programmable control function in the main CPU, therefore, it can control such as cargo, ballast and cooling water without additional equipments, and provide graphical status display and operation.

High Reliability

All the units such as the main CPU, VDU, I/O module, support hot swapping to minimize downtime. Moreover, the main CPU supports hot spares, duplicated system network, and loop networkd

Easy Operation

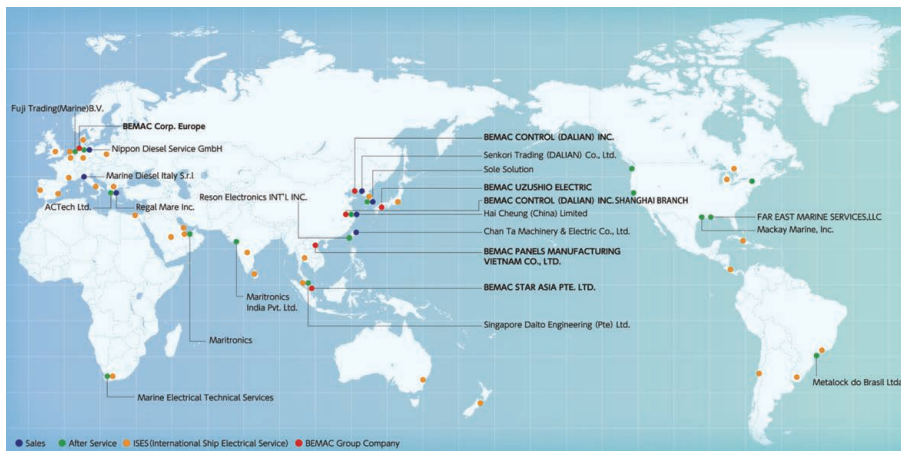

Intuitive operation is provided by the user interface unified BE-Data series. Operation with multipoint touch panel and trackball makes it easy to operate power machine, pump, valve and PID control on the ship.

After-sales service

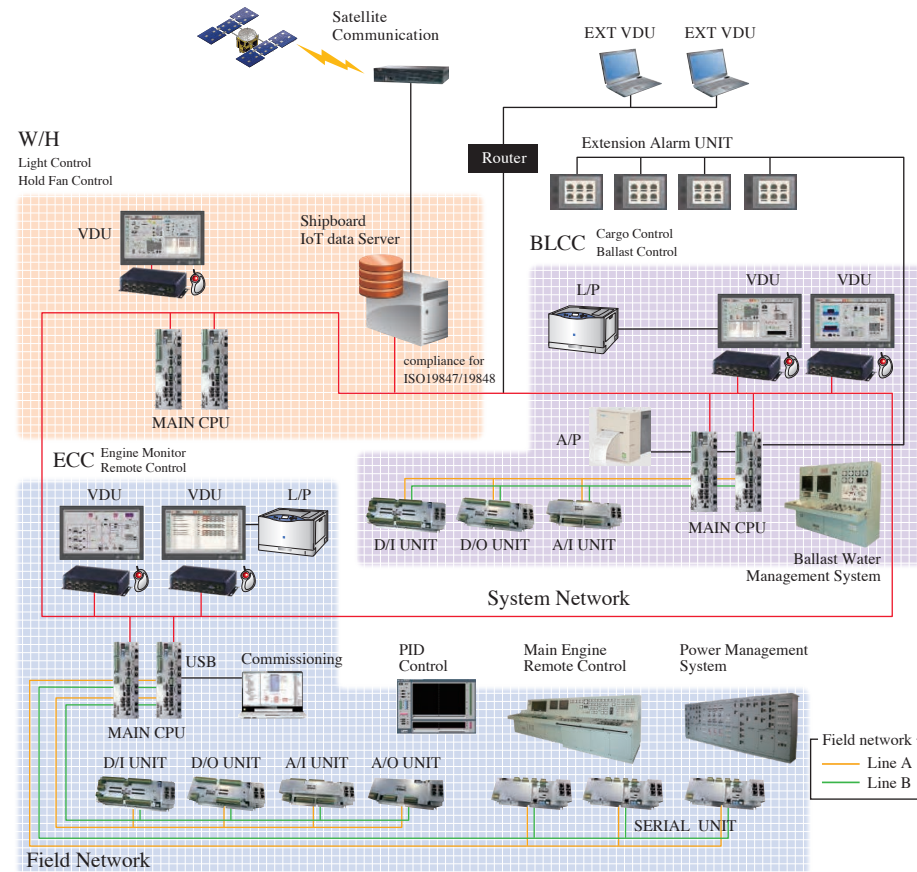

Our initial action for services will be within 24hours by high reliable technologies to world wide area, 365days per year.

Wherever your vessel and whatever the issue, you can be assured that our extensive worldwide service network and experienced service engineers are always on hand for prompt troubleshooting and quick delivery of solutions.

Fast action is served for your needs to maintain efficient management of the vessels.
